HTML 5

Create PDFs from your HTML5 documents without additional pre-processing or clean-up. Supports all HTML5 elements.

JavaScript

Transfer your JavaScript driven layouts and widgets to your PDFs. Support for HTML5 Canvas, flotr2 and other JavaScript libraries.

Web Fonts

Enhance your documents with beautiful fonts without having to install any fonts on the server or the user's system.

CSS3

Use cutting-edge CSS3 to create great looking tables, text and more. Apply gradients to elements and transform, rotate and scale them.

Try It Now

Amazing versatility. Outstanding performance. Superb quality.

PDFreactor is a powerful formatting processor for the conversion of HTML into typeset quality PDF documents for print and electronic distribution. It uses Cascading Style Sheets (CSS) to define page layout and styles.

PDFreactor 6 supports the latest trends in W3C Web Standards for HTML5 and CSS3. PDFreactor 6 also adds support for the HTML5 Canvas element and its new JavaScript engine enables the use of popular JavaScript libraries and frameworks including jQuery, Prototype and Flotr2.

More Information

Now Available in PDFreactor 6.1: Raster Image Output

Create raster images from your HTML documents. Generate thumbnails, previews and high-fidelity graphics from your documents. Supported image formats include PNG, JPG and multipage TIFF. Read More.

Customers
